

## SmartDispenser™ Piston Stabilizer

For more information on Fishman's dispensing capabilities, please contact one of our sales representatives at **800-433-2115**.

Ideal for use with thick fluids, 75,000 cps or greater, that generate a high degree of reservoir backpressure. The stabilizer is precision-machined to fit inside the non-dispensing end of the piston, providing support that stops piston deflection, or piston cocking, inside the syringe reservoir, greatly increasing dispense repeatability. The unique clamshell design allows for easy attachment or detachment.

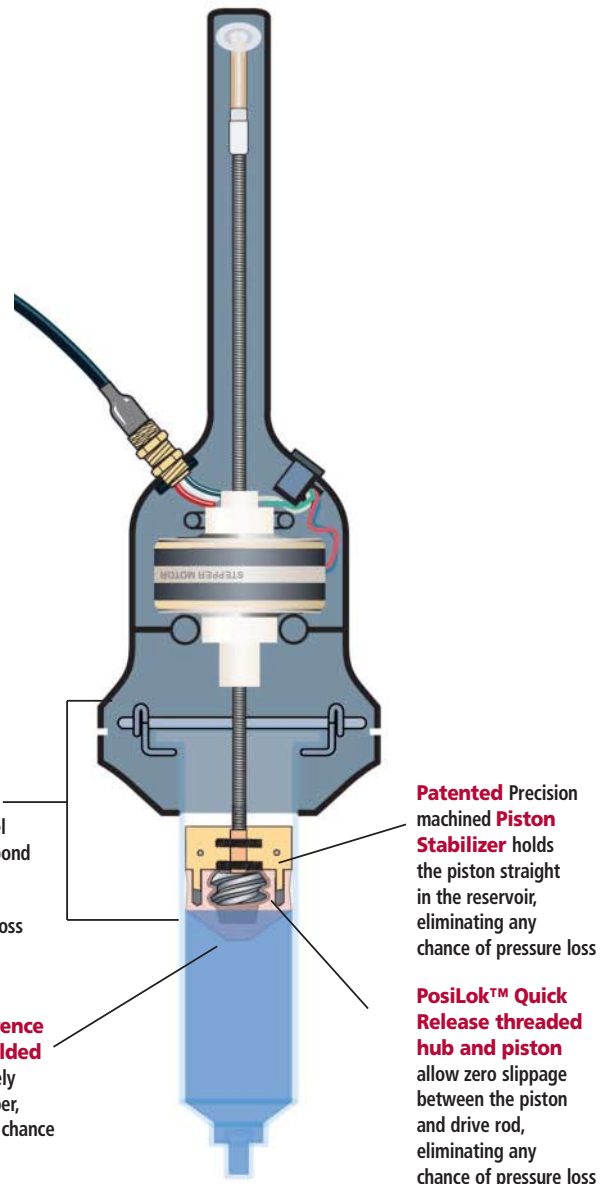

Manufactured using inert industrial strength Delrin®, the stabilizer is available in 5cc, 10cc, and 30cc sizes. Each kit comes complete with a stabilizer and everything you need to easily attach the disposable stabilizer to the dispense gun.

### Features and Benefits

- Stops piston deflection during high pressure dispensing
- Keeps piston from cocking during high pressure dispensing
- Easy to use clamshell design
- Available in 5cc, 10cc and 30cc sizes
- For use with all SmartDispenser™ dispense guns

### Reorder Numbers

5cc	Y010101
10cc	Y020101
30cc	Y030101
