SmartDispenser®

SSDAV High Torque Fiber Optic Benchtop Automation System

AirFree® Technology & Fiber Optic Connectors

The SmartDispenser® SSDAV-HT-FO Benchtop System is ideal for dispensing epoxies for bonding glass fiber to ceramic ferrules. The ProcessControl^{2®} program manages two part epoxies, such as 353ND, and other fiber optic assembly fluids so each ferrule is filled without over flow or air gaps.

Traditional air pressure systems lack the repeatability from one fluid deposit to the next needed for fiber optic connector assembly. AirFree® technology stabilizes the fluid dispensing process providing the highest repeatability when compared to any fluid dispenser.

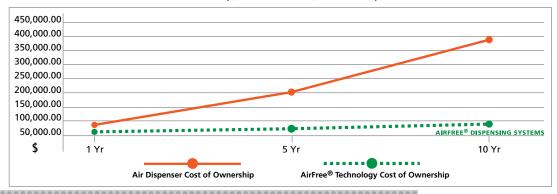

AirFree® Technology & Automation

AirFree® technology acts as an additional axis when mounted on a benchtop automation system. The precise control engineered into the X, Y and Z axis is now applied to the fluid delivery axis. All axes are motor driven lead screws with known speeds and can be coordinated providing the highest precision and repeatability available on a benchtop robot.

Genius® Dispensing Components

Genius® dispensing components have a thick wall design eliminating flexing and a zero draft assuring smooth flow. Disposable design eliminates the use of harmful cleaning agents such as mek or acetone. The polypropylene reservoir protects assembly workers from coming in contact with harmful assembly fluids. When empty the capped syringe acts as a sealed container making disposal easier and safer.

Hiflow[™] dispense tips are made from 19g (.042"- O.D.) and 20g (.035" - O.D.) which fit perfectly into the fiber optic ferrule's port. The inner diameter of both tips are 15% larger allowing for a higher flow rate of fluid which eases the ferrule filling process.
