# SmartDispenser®

Desktop Control of your SmartDispenser®

Instant Real Time Monitoring and Program Changes from your Desktop, Smartphone or Tablet.

Access all of your installed SmartDispensers from your desktop, tablet or smartphone from your office, home office or any other location worldwide. Use Microsoft® Remote Desktop Protocol (RDP) to access your networked SmartDispensers as you would any PC or laptop on the network.

Networking reduces the time needed to assist operators with any problems. It provides production data and device history records needed for equipment validation for cost accounting. It provides global control of all SmartDispensers producing a single product.

RDP

- Make a programming change to one or all of your SmartDispensers.

- Gain access to the previous day's production yields per system.

- Make administrative changes to the SmartDispenser® settings.

- Download software apps customizing your SmartDispenser® to your application needs.

- Verify the proper program settings that were used on yesterday's production.

Each SmartDispenser® runs a full version of Windows Ultimate® 7. In effect the SmartDispenser® is a personal computer as well as a fluid dispenser. All the same network protocols and security measures applied to networked PC's, laptops and tablets apply to the SmartDispensers.
